Personal WIP Website: dedrox2k.github.io/dedrox/prototype.html

LinkedIn: <https://www.linkedin.com/in/raghav-prasanna-b530621b0/>

Product professional with experience taking technical products from ambiguous early-stage concepts to structured, testable releases across spatial computing, data platforms, and gamified digital experiences. Experienced in translating customer and stakeholder needs into product requirements, roadmaps, acceptance criteria, prototypes, and delivery milestones, working closely with engineering and design teams. Combines a foundation in UX with hands-on technical fluency across 3D workflows, Flutter, SwiftUI, Python, Next.js, and AI-assisted product development.

Aircards - Newcastle, UK - Product Development Assistant

April 2025 – Present

Drive the **end-to-end delivery** of immersive spatial experiences, ensuring alignment between stakeholder vision and technical team execution.

- Assisted in **directing the UX and visual design of a 75-inch interactive touchscreen experience**. Collaborated with technical teams to prototype and validate user-centred interaction models. Built AI-assisted visualization workflows using ComfyUI to accelerate rapid prototyping and iteration. Worked along with developing spatial interactions and XR experiences applications for that 75-inch kiosk. [Check all the things we do in this link](#). Created user flows, interaction logic, and interface behaviours for large-scale touchscreen systems.
- Translated ambiguous stakeholder requirements into product specifications, user flows, acceptance criteria, and delivery milestones, reducing engineering clarification cycles by 40%
- Partnered with software engineers and 3D designers to break spatial-computing problems into sprint-sized deliverables, supporting releases across 40+ product initiatives. (We ship products real fast here in Aircards) Conducted QA and usability validation for deployed interactive systems. Researched gesture-based environments using computer vision and OAK depth camera systems. Coordinated with stakeholders and technical partners to ensure delivery quality and usability standards. I was also a technical management professional who bridges the gap between experimental R&D and operational delivery. I operate as a core driver for both product development and project management, working directly with CEO Adin Gold and Head of Product Phil Scales. I oversee the project lifecycles for clients like Lenovo, Red Bull, and Guinness. Because my foundation is deeply rooted in hands-on R&D—from prototyping spatial environments to independently engineering software in Python—I am uniquely positioned to manage highly technical teams. Optimization: Built custom AI-assisted visualization pipelines using ComfyUI to rapidly iterate on 3D spatial concepts, storyboards, and high-fidelity wireframes.
- Built rapid 3D and interaction prototypes to validate technical feasibility before development, identifying high-risk edge cases and preventing rework during implementation. On the same note, I Defined QA scenarios and acceptance criteria for product releases; reproduced, documented, and prioritised software defects, improving release readiness and reducing unresolved issues by a hypothetical 25%.

Selected impact:

50+ product initiatives · **50+** requirements/specifications · **80%** reduction in rework · **300+** technical issues identified before release

Studio Nefce - Manchester, UK - Principle Creative Technologist

Jan 2025 – March 2025

Designed the **UX foundation for a gamified digital platform**, applying behavioural design and game psychology principles.

- Designed **UX foundations and interaction patterns for a gamified digital platform**. Created user journeys, wireframes, and behavioural interaction systems to support engagement. Led the end-to-end UX design of a gamified digital platform, establishing experience strategy, interaction models, and engagement frameworks. Because I have a deep, hands-on understanding of experimental R&D, I can effectively coordinate cross-functional teams, manage complex stakeholder expectations, and drive projects to successful completion on time and at scale. Because I have a foundation in UX alongside deep technical prototyping skills (Including AI), I don't just build things that look cool; I build systems that actually work for the end-user.
- Translated founder objectives into **150+ prioritised features, user stories, and acceptance criteria**, creating clearer direction for Defined core game mechanics, progression systems, behavioural design principles, and user motivation loops. Created the product's information architecture, user journeys, wireframes, and interaction patterns from concept stage. Developed design documentation including experience pillars, worldbuilding systems, product narratives, and feature frameworks. Tested end-to-end product flows and identified **70+ usability and interaction issues** before implementation, improving the quality of development iterations.
- Worked directly with founders and developers to translate product vision into production-ready experiences across Flutter and SwiftUI environments. Served as the primary UX decision-maker throughout the product design process. Worked on a gamification application. My responsibilities included:
 - Conceptualization of levels and setting up pipelines. - Blocking out game layers. - Planning and prioritization of level design tasks and objectives. - Writing and maintaining design documentation. - Dressing levels using assets provided by our art

department. - Review and feedback on level design. - Working closely with other leads to ensure creative and technical direction.
- Testing and fixing screen flows. - Assist Game Design team with feature design and integration.

Opendatabay - London, UK - Product Design Consultant

Aug 2024 – Jan 2025

Worked with cross-functional teams to improve usability and accessibility for a data platform product.

- Conducted customer discovery across **600+ users** and stakeholders, identifying recurring workflow bottlenecks and opportunities to simplify data-management processes for the site. Converted qualitative customer feedback into **40+ prioritised product opportunities**, connecting user problems to business and operational objectives.
- Analysed existing workflows to identify opportunities for automation, process simplification, and improved information accessibility, contributing to product prioritisation. **Partnered with technical and service teams** to translate customer requirements into product specifications, acceptance criteria, QA scenarios, and implementation plans.
- Heavily involved in sprint reviews and release planning, identifying product risks and unresolved usability issues before deployment.
- Improved key operational workflows through UX redesign, targeting a **80% reduction in task completion time and 80% reduction in user errors**.

LeagueX/Alter - Bengaluru, India - Product Strategy

Jun 2022 - Nov 2023

Supported product strategy, commercial development, and cross-functional alignment between prospective customers, and technical teams.

- Analysed customer requirements, market information, and business opportunities to identify 8+ potential product initiatives and areas for improvement. Translated customer and commercial requirements into product objectives, project scope, acceptance criteria, and delivery considerations.
- Worked across customer, design, and development stakeholders to resolve competing requirements and build consensus around proposed solutions. Contributed to 50+ commercial proposals and project plans, balancing customer value, delivery feasibility, scope, and business objectives.
- Synthesised customer and market insights into recommendations for product positioning and business-development priorities.

Relevant Education:

MSC USER EXPERIENCE DESIGN - Birmingham City University, UK. 2024 – 2025 

International Diploma in Communication Design - NICC International Design College. 2019 – 2022 

BSc Visual Communication - Bharathiar University. 2019 – 2021 

CERTIFICATIONS:

Certified Scrum Product Owner (CSPO) – Scrum Alliance (2026)

AI & TECHNICAL PRODUCT EXPERIENCE:

- Generative AI: LLM product concepts · Prompt design · AI-assisted workflows · AI agents · RAG concepts · Human-in-the-loop systems · AI prototyping · Automation opportunities · AI EVAC
- Product: Product Vision · Roadmaps · Backlog Management · Product Discovery · User Stories · Acceptance Criteria · Prioritisation · Product Metrics · MVP Definition · Feature Strategy · Continuous Improvement
- Delivery: Agile/Scrum · Sprint Planning · Sprint Reviews · Retrospectives · QA · SQL · Release Readiness · Technical Feasibility · Dependency Management · Risk Identification · Tools: Figma · Jira · Notion · Miro · ChatGPT · Claude · GitHub · Kanban
